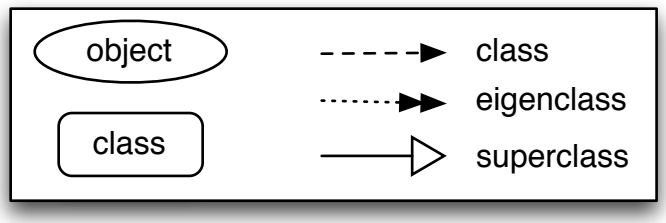
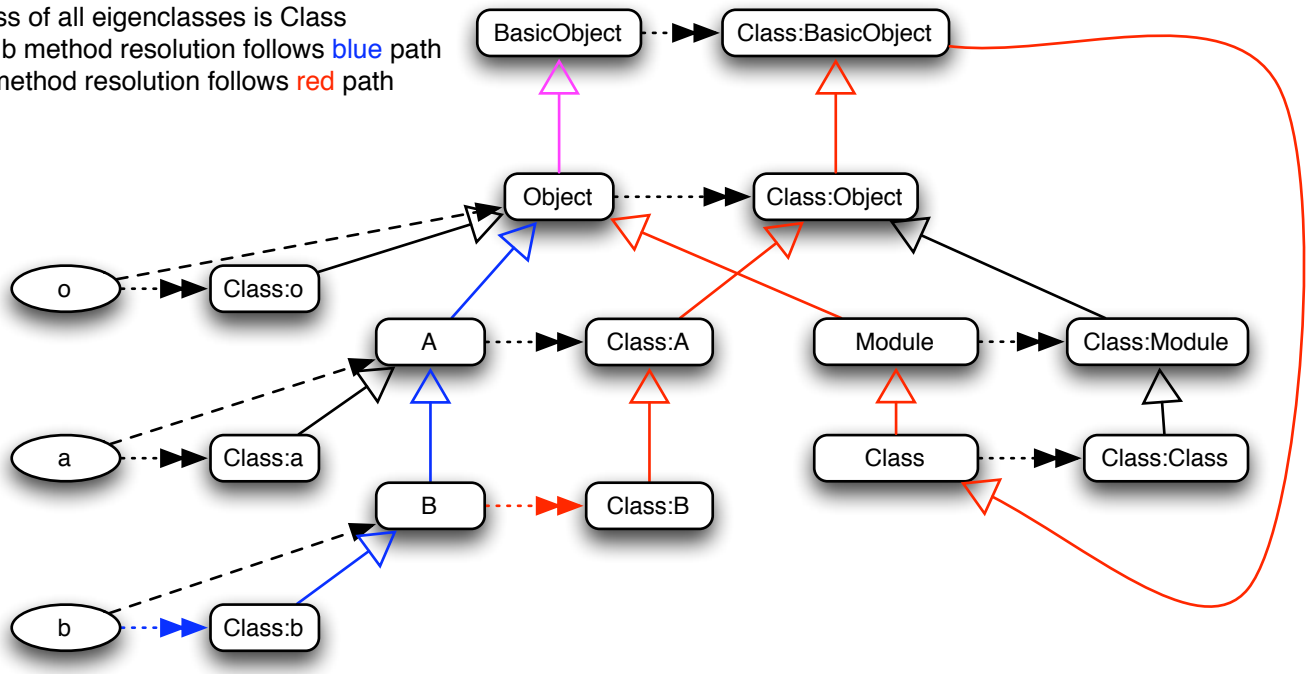
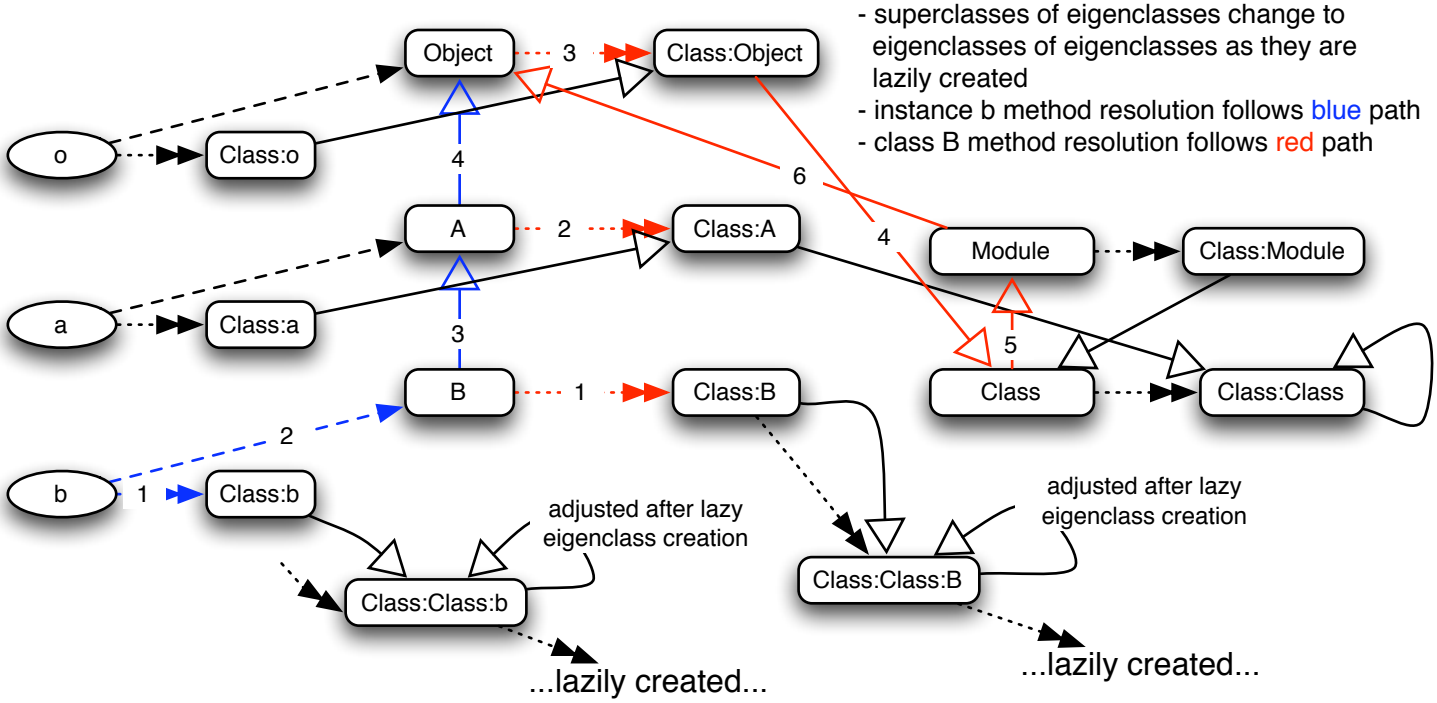
```
class Object; def eigenclass; class<<self; self; end; end; end
class A; end
class B<A; end
o=Object.new; a=A.new; b=B.new
```



mri ruby 1.9.0

- class of all classes [incl eigenclasses] is Class
- eigenclass of all eigenclasses is Class
- instance b method resolution follows blue path
- class B method resolution follows red path



mri ruby 1.8.6 / jruby 1.1.4


- class of all classes [incl eigenclasses] is Class
- eigenclasses of eigenclass are a lazily created endless chain
- superclasses of eigenclasses change to eigenclasses of eigenclasses as they are lazily created
- instance b method resolution follows blue path
- class B method resolution follows red path
